

1. What is Azure Data Factory (ADF)?

- IDE
- Storage
- Database
- ETL service

Answer: ETL service

2. ADF is primarily used for?

- Networking
- Gaming
- UI design
- Data integration

Answer: Data integration

3. Which activity copies data?

- If Condition
- Lookup
- Copy Activity
- Delete

Answer: Copy Activity

4. ADF pipelines are?

- Logical group of activities
- Databases
- Tables
- Storage units

Answer: Logical group of activities

5. Which triggers pipeline execution?

- Linked Service
- Dataset
- Trigger
- Activity

Answer: Trigger

6. Which activity executes SQL?

- Copy Activity
- Delete
- Stored Procedure Activity
- Lookup

Answer: Stored Procedure Activity

7. Lookup activity is used for?

- Moving data
- Deleting data
- Transforming
- Fetching data

Answer: Fetching data

8. Which activity deletes data?

- Copy
- Join
- Lookup
- Delete Activity

Answer: Delete Activity

9. ADF supports which transformation?

- Data Flow

- Sorting only
- Partitioning
- Indexing

Answer: Data Flow

10. What is ADLS?

- App Service
- Data Lake Storage
- Database
- Cluster

Answer: Data Lake Storage

11. ADLS Gen2 is built on?

- Blob Storage
- SQL
- VM
- Kubernetes

Answer: Blob Storage

12. Blob storage is used for?

- Compute
- Relational data
- Object storage
- Networking

Answer: Object storage

13. Container in Blob is?

- Cluster
- Folder-like structure
- File
- DB

Answer: Folder-like structure

14. Linked Service represents?

- Connection string
- Table
- Pipeline
- Trigger

Answer: Connection string

15. Dataset represents?

- Cluster
- Pipeline
- Trigger
- Data structure

Answer: Data structure

16. Integration Runtime is?

- API
- Storage
- Compute infrastructure
- UI

Answer: Compute infrastructure

17. Self-hosted IR is used for?

- UI
- On-prem data
- Cloud only

- ML

Answer: On-prem data

18. Azure IR is?

- Storage
- Cloud compute
- UI
- Local compute

Answer: Cloud compute

19. Pipeline parameter is?

- Column
- Dynamic input
- Table
- Static value

Answer: Dynamic input

20. Variable in ADF is?

- Dataset
- Runtime storage
- Table
- Trigger

Answer: Runtime storage

21. If Condition activity is?

- Delete
- Copy
- Conditional logic
- Loop

Answer: Conditional logic

22. ForEach activity is?

- Join
- Filter
- Condition
- Loop

Answer: Loop

23. Until activity is?

- Single run
- Delete
- Copy
- Loop until condition

Answer: Loop until condition

24. Web activity is?

- API call
- Copy
- Delete
- DB query

Answer: API call

25. ADF supports which format?

- CSV
- All
- JSON
- Parquet

Answer: All

26. Mapping Data Flow is?

- Trigger
- Visual transformation
- Storage
- Dataset

Answer: Visual transformation

27. Filter transformation is?

- Row filtering
- Aggregate
- Join
- Sort

Answer: Row filtering

28. Join transformation is?

- Filter
- Sort
- Combine datasets
- Delete

Answer: Combine datasets

29. Aggregate transformation is?

- Filter
- Join
- Group data
- Delete

Answer: Group data

30. Derived column is?

- Delete
- Sort
- Join
- Add/modify column

Answer: Add/modify column

31. Sink is?

- Trigger
- Pipeline
- Destination
- Source

Answer: Destination

32. Source is?

- Input data
- Output
- Trigger
- Compute

Answer: Input data

33. Debug mode is used for?

- Delete
- Production
- Testing
- Deployment

Answer: Testing

34. Publish in ADF means?

- Run
 - Delete
 - Test
 - Deploy changes
- Answer:** Deploy changes

35. Trigger types include?
- Event
 - All
 - Schedule
 - Manual
- Answer:** All

36. Event trigger is?
- File-based trigger
 - Time-based
 - Manual
 - None
- Answer:** File-based trigger

37. Schedule trigger is?
- None
 - File-based
 - Manual
 - Time-based
- Answer:** Time-based

38. Manual trigger is?
- On-demand
 - Time
 - File
 - Auto
- Answer:** On-demand

39. Copy activity supports?
- Delete
 - No copy
 - Parallel copy
 - Single thread
- Answer:** Parallel copy

40. Staging is used for?
- Final output
 - UI
 - Compute
 - Temporary storage
- Answer:** Temporary storage

41. Data Flow runs on?
- Blob
 - VM
 - Spark cluster
 - SQL
- Answer:** Spark cluster

42. Schema drift is?
- Error
 - Fixed schema

- Flexible schema
- None

Answer: Flexible schema

43. Partitioning helps?

- Delete
- UI
- Performance
- Storage

Answer: Performance

44. Watermark is used for?

- Delete
- Full load
- Incremental load
- UI

Answer: Incremental load

45. Integration runtime types?

- Azure, Self-hosted, SSIS
- Only Azure
- Only Local
- None

Answer: Azure, Self-hosted, SSIS

46. SSIS IR is used for?

- Lift and shift
- Storage
- Delete
- UI

Answer: Lift and shift

47. Blob tiers include?

- Fast, Slow
- None
- Hot, Cool, Archive
- Cold, Warm

Answer: Hot, Cool, Archive

48. Data Lake zones?

- Raw, Curated, Trusted
- Only Curated
- Only Raw
- None

Answer: Raw, Curated, Trusted

49. ADF monitoring is done via?

- Dataset
- Trigger
- Monitor tab
- Pipeline

Answer: Monitor tab

50. Retry policy is?

- Join
- Delete
- Sort
- Error handling

Answer: Error handling
